

IN THE CLAIMS

The status of each claim in the present application is listed below.

1. (Currently Amended) A transparent sheet, ~~characterized in that it consists of a~~
comprising a transparent flexible composition layer which comprises 500 to 5,000 parts by
mass of a liquid material (B) based on 100 parts by mass of a thermoplastic elastomer
component (A), and has a total transmittance of 90% or higher at 25°C and at a thickness of
0.5 mm,

wherein said thermoplastic elastomer component (A) is a hydrogenated block polymer
of a conjugated diene obtained by polymerization without using, as a monomer, an aromatic
vinyl compound.

2. (Original) The transparent sheet according to Claim 1, comprising a transparent
resin layer on at least one surface of said transparent flexible composition layer.

3. (Original) The transparent sheet according to Claim 1, comprising a removable
protective film layer on at least one surface of a surface-exposed face among said transparent
flexible composition layer and said transparent resin layer.

4. (Original) The transparent sheet according to Claim 1, wherein thickness of said
transparent flexible composition layer is 2.0 mm or less, and total thickness is 10 mm or less.

Claims 5-7: (Canceled).

8. (Original) The transparent sheet according to Claim 1, wherein said liquid material (B) is a liquid material having a kinematic viscosity of not higher than $500 \text{ mm}^2/\text{s}$ at 40°C and being nonvolatile at a temperature between -100 and 50°C .

9. (Currently Amended; Withdrawn) A method for producing a transparent sheet, ~~characterized by comprising:~~

forming a transparent flexible composition layer by molding a transparent flexible composition which comprises 500 to 5,000 parts by mass of a liquid material (B) based on 100 parts by mass of a thermoplastic elastomer component (A), and has a total transmittance of 90% or higher at 25°C and at a thickness of 0.5 mm by an extrusion method, a coating method, a casting method, a press method, an injection molding method or an inflation method,

wherein said thermoplastic elastomer component (A) is a hydrogenated block polymer of a conjugated diene obtained by polymerization without using, as a monomer, an aromatic vinyl compound.

10. (Currently Amended; Withdrawn) The method for producing a transparent sheet according to Claim 9, wherein a removable protective film layer is provided by laminating a protective film on at least one surface of said transparent flexible composition layer ~~and said transparent resin layer.~~

11. (Currently Amended; Withdrawn) A The method for producing a transparent sheet, according to Claim 9, further comprising ~~characterized by~~ laminating a transparent resin layer on at least one surface of a said transparent flexible composition layer ~~which comprises 500 to 5,000 parts by mass of a liquid material (B) based on 100 parts by mass of a~~

~~thermoplastic elastomer component (A), and has a total transmittance of 90% or higher at 25°C and at a thickness of 0.5 mm.~~

12. (Withdrawn) The method for producing a transparent sheet according to Claim 11, wherein a releasable protective film layer is provided by laminating a protective film on at least one surface of said transparent flexible composition layer and said transparent resin layer.

13. (New) The transparent sheet according to Claim 1, wherein said thermoplastic elastomer component (A) comprises at least one type of elastomer (A-1) selected from the group consisting of a hydrogenated block polymer of a conjugated diene, a hydrogenated block copolymer of an aromatic vinyl compound and a conjugated diene, and an ethylene- α -olefin-based rubber.

14. (New) The transparent sheet according to Claim 13, wherein said hydrogenated block polymer of a conjugated diene is a hydrogenated block polymer by hydrogenating a block polymer having, in its molecule, at least one butadiene polymer block (I) having a vinyl block content of 5 to 25% in the block and at least one polymer block (II) having a mass ratio of a conjugated diene to other monomer of (100 to 50)/(0 to 50) and having a vinyl bond content of 25 to 95% by mass.

15. (New) The transparent sheet according to Claim 13, wherein said thermoplastic elastomer component (A) further comprises another elastomer (A-2).
